jaapmoolenaar.nl

As the founder of jaapmoolenaar.nl, I've successfully delivered custom web solutions for over a decade or two. I am a versatile and experienced **full stack web developer**, adept at handling both front-end and back-end challenges with technologies like **PHP, Laravel, Javascript, and Docker**. By **bridging technology and usability**, I deliver solutions with clean code and solve complex challenges, this way, I've earned recognition for my **reliability** and **human-centric approach**. My freelance work ranges from short-term interim assignments to long-term commitments, offering solutions to drive innovation. I am always looking for an engaging project to leverage my technical expertise, or that new technology to learn to add to my knowledge.

Top freelance projects

Senior full stack developer 4.5 years

As part of the talented team at ASICS Technology, I contribute to the development of a highly flexible B2B sales application. This platform is built with Laravel, Go, and Vue.js and is deployed on AWS using Kubernetes. Each challenge I encounter provides an opportunity to showcase my skills and further refine my expertise as a full-stack web developer.

A standout achievement during this project was the successful implementation of a 3D product designer using Spectrum. This role required me to navigate the complexities of Japanese business culture and transform their requirements into practical, effective solutions. Collaborating with various vendors presented unique challenges, especially in ensuring their workflows remained unaffected. This necessitated translating legacy features into functionalities compatible with ASICS' B2B system.

I am particularly proud of the recognition I received for my ability to adapt to Japanese cultural and business practices—an accomplishment that continues to resonate as a highlight of my professional journey.

⚡ PHP, Laravel, Symfony, Vue.js, Docker, Kubernetes

PHP-Developer 8-9 months

For my first freelance assignment I was able to go into familiar territory, I already had a permanent job at Websteen a while back. I was able to put the extra years of experience I gained in the meantime, to good use as a backend Laravel developer.

⚡ PHP, Laravel, Vue.js, jQuery, MySQL, Docker (Sass)

Front-end developer (Co-Founder) 2 years

In collaboration with Cloudzilla we have been developing a bot that can trade a large number of currencies on various exchanges based on strategies devised by the end user. I have mainly used my front-end knowledge here and had a major role in designing the inner workings of the system.

⚡ Vue.js, Docker (Stylus, Sass)

What came before

Medior / Senior PHP-developer 4 years and 10 months

At B4ict, with Laravel as a base, I created a fully modular framework. This framework is currently used for various types of systems, ranging from access control (and registration) systems to online (automobile) workshop planners. At B4ict I was fully responsible for the web development department. I also installed and managed the (linux) servers.

⚡ PHP, Laravel / Symfony, Vue.js, jQuery, MS SQL, Linux, VMware (Sass, Less)

Junior / Medior PHP-developer 6 years and 2 months

My first permanent job as a professional PHP developer was at Websteen. My work included (re)building the content management system and deploying it for a large number of websites and applications. The CMS is still used today for a large part of the applications Websteen manages.

⚡ PHP, jQuery, Zend-Framework (CSS)
